

I'm not robot!

One of the easiest ways to rotate a picture on a PowerPoint slide is to free rotate the picture. When you free rotate a picture, the angle changes depending on how much you rotate the picture. If the free rotate doesn't work for you, rotate the picture by 90 degrees or set a rotation angle. Instructions in this article apply to PowerPoint 2019, 2016, 2013, 2010, and PowerPoint for Microsoft 365. Select the picture you want to rotate. A rotation handle appears at the top of the image. Hover over the rotation handle. The cursor changes to a circular tool. Drag the rotation handle to the left or to the right to rotate the picture. To rotate by precise 15-degree increments, press and hold the Shift key while you drag the rotation handle. Rotate the image until you reach the desired angle of rotation. You may have a specific angle in mind to apply to a picture on a PowerPoint slide. Follow these steps for an alternative option. Select the picture you want to rotate. Go to Picture Tools Format. In the Arrange group, select Rotate Objects to view a list of rotation options. Select More Rotation Options to open the Format Picture pane. In the Format Picture pane, select the Size & Properties tab, if it is not already selected. In the Rotation text box, use the Up and Down arrows to select the correct angle of rotation, or enter the angle in the text box. As you change the angle, the image rotates on the slide. To rotate the picture to the left, type a minus sign in front of the angle. For example, to rotate the picture 12-degrees to the left, type -12 in the text box. Select the picture. Go to Picture Tools Format. In the Arrange group, select Rotate Options. Select either Rotate Right 90 degrees or Rotate Left 90 degrees. If you need to completely flip the photo, learn how to Flip a Picture on a PowerPoint Slide. Thanks for letting us know! Tell us why! Skip to contentHome » Articles » How to Crop a Picture in PowerPoint (Step-by-Step)Download our free cheat sheet.The top 25 PowerPoint shortcuts that save time... we bet you don't know many of these! The rotation option for movie files -- and all objects -- in PowerPoint is found in the Arrange section of the Format tab. PowerPoint uses contextual tabs in the Microsoft Office ribbon for formatting and options, so your movie file can be adjusted in the Video Tools tabs. There are two tabs. One is labeled Format and lets you change the size, shape, position and effects. The other tab -- Playback -- allows you to adjust how the movie file acts in the presentation. Open PowerPoint, if you haven't done so already. Click "Insert" from the list of tabs and then click "Video" on the right. If you click the arrow underneath the icon, you can choose from different options, like inserting a movie file from your computer, inserting a Web video or searching through the Microsoft Office clipart for a video. Browse to the location of the movie file on your computer. Click the file to select it. Note that the button at the bottom of the dialog box says "Insert." This will embed the video in your PowerPoint presentation. If you don't want to do that, click the arrow on the button and choose "Link to File." This keeps the size of your PowerPoint file smaller, but if you move the presentation to another computer you'll need to package the video file with it. When you're done, click the button to place the video in your presentation. Click on the "Video Tools: Format" tab. Note that this tab is only visible if you have a movie file selected. If you don't see it, click on the movie file and it will appear. Click the "Rotate" button in the Arrange section on the right. The symbol looks like two triangles with an arrow showing the rotation. When you click it, you'll see different rotation options. You can rotate the movie file 90 degrees to the left or right. You can also flip the video horizontally or vertically; this creates a mirror image of the movie. If you need to specify an angle, click "More Rotation Options." There you can type in a specific number of degrees to rotate the movie. In Windows: In Normal view, press Design > Slide Size > Custom Slide Size. Under Orientation, select Vertical, and set the Height and Width. On the web: Design > Slide Size > Custom Slide Size > Portrait > OK. Then choose how slides fit the screen. On a Mac: File > Page Setup. Select Portrait, adjust the size as needed, and press OK. This article explains how to change the orientation of PowerPoint slides between portrait and landscape. Instructions in this article apply to PowerPoint for Microsoft 365, PowerPoint 2019, PowerPoint 2016, PowerPoint 2013, PowerPoint 2010, PowerPoint 2007, PowerPoint for Mac, and PowerPoint Online. The steps used to change the page orientation between landscape and portrait are the same in all versions of PowerPoint 2013 for Windows and newer. In the Normal view, click the Design tab. Select Slide Size. Select Custom Slide Size. Use the buttons in the Orientation section to select a vertical orientation or enter dimensions in the Width and Height fields. Select OK to apply the changes. Follow these steps to change from landscape to portrait slide orientation in older versions of PowerPoint for Windows. Select the Design tab, and in the Page Setup group, click Slide Orientation. Choose Portrait. Press OK to save your changes. To change the page orientation from landscape to portrait in PowerPoint for Mac 2011. Select the File menu and choose Page Setup. In the Page Setup dialog box, across from Slides, select the Portrait orientation. As an alternative, select custom dimensions in the Size section, making the height greater than the width. Choose OK to apply the changes. For a long time, PowerPoint Online didn't offer a portrait orientation slide, but that has changed. Select the Design tab. Select Slide Size, then choose Custom Slide Size. Select the Portrait orientation image. Select OK to apply the changes. You have the choice to either choose Maximize, which maximizes the use of the available slide space, or click Ensure Fit, which makes sure that the slide content fits on the vertical portrait orientation. There is no simple way to combine landscape slides and portrait slides in the same presentation. If you've worked with slide presentations, you know that this is a basic feature. Without it, some slides won't present the material effectively, such as with a lengthy vertical list, for example. There is a workaround if you must have this capability. Thanks for letting us know! Tell us why! If you've ever tried grouping objects together in PowerPoint and it doesn't work...then you have just discovered what few people realize...NOT all PowerPoint objects can be part of a group. Here is a quick list of objects that can NEVER be part of a PowerPoint Group, but that doesn't mean they can't be ungrouped (see uncommon objects that can be ungrouped here). A. Tables Amongst the many downfalls of tables in PowerPoint, tables cannot be part of a group (ever). If you decide not to ungroup your table, it's usually best to first layout your other objects on your slide, and then using the alignment tool, fit the table into the correct position within your layout. B. SmartArt graphics Although a special type of PowerPoint group itself, SmartArt graphics themselves cannot be part of a group with other objects, including other SmartArt graphics. C. Content Placeholders Content placeholders are defined as anything set on your Slide Master that is editable in the Normal View of your presentation. This includes things like titles, sub-titles, page numbers, etc. These content placeholders cannot be part of a group and there is currently no workaround that I'm aware of. The vast majority of objects can be grouped: Everything else in PowerPoint can be part of a group, including other groups of objects that you have already grouped, pictures, images, charts, shapes, text boxes, vector graphics, etc. Most of the multimedia objects you can insert into PowerPoint cannot be part of a group. For example, if you narrate your PowerPoint presentation or add music, you cannot group those objects as part of your layout. To learn how to narrate a PowerPoint (with audio and/or video narrations), read our narration guide here.
